

More than 3 million Virginians are breathing unhealthy levels of smog and soot pollution according to the American Lung Association State of the Air 2007 report. Over 490,000 Virginians with lung, heart and/or diabetes are living in cities that received a grade of F for smog or soot pollution according to the report.

Despite the severity of these health concerns, many old under-controlled power plants still operate in Virginia.

These level of air pollution are unacceptable and I urge the Virginia Department of Environmental Quality to uphold the Clean Air Act by issuing a permit that limits Mirant's emissions of all pollutants, including fine particulate matter (PM2.5), to levels allowed by health-based standards, both in regional and local areas. I also support the establishment a local air pollution control district in the areas of Alexandria impacted by Mirant.

I urge you to require polluters to clean up our air to protect public health.

Sincerely,

Ann Huff
Norfolk, VA 23521

Roanoke, VA 24015

More than 3 million Virginians are breathing unhealthy levels of smog and soot pollution according to the American Lung Association State of the Air 2007 report. Over 490,000 Virginians with lung, heart and/or diabetes are living in cities that received a grade of F for smog or soot pollution according to the report.

Despite the severity of these health concerns, many old under-controlled power plants still operate in Virginia.

These level of air pollution are unacceptable and I urge the Virginia Department of Environmental Quality to uphold the Clean Air Act by issuing a permit that limits Mirant's emissions of all pollutants, including fine particulate matter (PM2.5), to levels allowed by health-based standards, both in regional and local areas. I also support the establishment a local air pollution control district in the areas of Alexandria impacted by Mirant.

I urge you to require polluters to clean up our air to protect public health.

Sincerely,

Jennifer Patrick
Sterling, VA 20165

Vienna, VA 22182

More than 3 million Virginians are breathing unhealthy levels of smog and soot pollution according to the American Lung Association State of the Air 2007 report. Over 490,000 Virginians with lung, heart and/or diabetes are living in cities that received a grade of F for smog or soot pollution according to the report.

Despite the severity of these health concerns, many old under-controlled power plants still operate in Virginia.

These level of air pollution are unacceptable and I urge the Virginia Department of Environmental Quality to uphold the Clean Air Act by issuing a permit that limits Mirant's emissions of all pollutants, including fine particulate matter (PM2.5), to levels allowed by health-based standards, both in regional and local areas. I also support the establishment a local air pollution control district in the areas of Alexandria impacted by Mirant.

I urge you to require polluters to clean up our air to protect public health.

Sincerely,

Sandra Kenyon
Locust Grove, VA 22508
